

Antire

ANTIRE ACCELERATOR

Digital Knowledge Universe

Trusted, AI-enabled knowledge reuse. Turning fragmented documents, diagrams and expert know-how into governed, source-backed answers.

Antire

Most organizations already have the knowledge they need, but it is spread across SharePoint, PDFs, manuals, diagrams and the heads of a few experts, which makes it hard to find, reuse or scale. Digital Knowledge Universe turns that fragmented material into a governed, AI-enabled knowledge base that gives source-backed answers.

KEY CAPABILITIES

Source-backed answers

Every response references the original material, so answers are fully traceable, not a generic AI guess.

Faster content creation

Training modules, summaries and technical explanations are drafted in a fraction of the time, with experts reviewing before anything ships.

Understands diagrams, not just text

Captures visual and technical context that plain text extraction misses.

Runs in your own secure environment

Deployed in a customer-owned Azure environment with governance and access control built in.

REFERENCE EXAMPLE

Danish Wind Power Academy used the accelerator to draft e-learning content from existing instructor material for its Hydraulics Technical Sprint course, with instructors validating every module before release.

60%+

Usable AI output target

Threshold for relevant, reusable training material per generation cycle.

100%

Source-backed answers

Every generated response references the original material.

3-10

Documents to first value

A focused set of documents is enough to validate on one use case.

TYPICAL USE CASES

Training content creation · technical knowledge assistant · engineering knowledge reuse · compliance intelligence · troubleshooting support · sales and service enablement

Put your knowledge to work.

Bring one document set. We will prove traceable answers on your own material.
